Generalized coordinates are usually selected to provide the minimum number of independent coordinates that define the configuration of a system, which simplifies the formulation of Lagrange's equations of motion. However, it can also occur that a useful set of generalized coordinates may be dependent, which means that they are related by one or more constraint equations.

PGs are found in intracellular compartments and at the cell surface but are also abundant in the ECMs (). They interact with numerous growth factors, cytokines and chemokines, cell surface receptors and ECM molecules either via their core proteins or, mainly, through their GAG side chains participating in several cell functional properties, such as cell signaling, proliferation, migration ...

It's hard to fathom, but somehow Thomas Piketty's 696-page book Capital in the Twenty-First Century is No. 1 on the Amazon bestseller list. It's a serious economics book that takes a long, hard look at the dynamics affecting the distribution of capital, the concentration of wealth, and the long-term evolution of inequality in advanced economies.

1 Introduction. The repertory grid technique (RGT or RepGrid) is a method for eliciting personal constructs, i.e. what people think about a given topic. It is based on George Kelly's Personal Construct Theory in 1955 and was also initially developed within this context. Personal Construct Psychology (PCP) states that people's view of objects they interact with is made up of a collection of ...
