

## *Chapter 10 Interrupt Handling Lwn*

### **Chapter 10 Interrupt Handling Lwn**

This is the web site for the Third Edition of Linux Device Drivers, by Jonathan Corbet, Alessandro Rubini, and Greg Kroah-Hartman. For the moment, only the finished PDF files are available; we do intend to make an HTML version and the DocBook source available as well. This book is available under ...

### **Linux Device Drivers, Third Edition [LWN.net]**

In system programming, an interrupt is a signal to the processor emitted by hardware or software indicating an event that needs immediate attention. An interrupt alerts the processor to a high-priority condition requiring the interruption of the current code the processor is executing. The processor responds by suspending its current activities, saving its state, and executing a function ...

### **Interrupt - Wikipedia**

Direct memory access (DMA) is a feature of computer systems that allows certain hardware subsystems to access main system memory (random-access memory), independent of the central processing unit (CPU).. Without DMA, when the CPU is using programmed input/output, it is typically fully occupied for the entire duration of the read or write operation, and is thus unavailable to perform other work.

### **Direct memory access - Wikipedia**

Introduction. Preamble. This how-to aims to provide an overview over all existing communication mechanisms between Linux user and kernel space. The goal is to present a starting point for a developer who needs to transfer data between Linux kernel modules and user space programs.
