Data Processing Services, Inc.

Data mining is the process of discovering patterns in large data sets involving methods at the intersection of machine learning, statistics, and database systems. Data mining is an interdisciplinary subfield of computer science and statistics with an overall goal to extract information (with intelligent methods) from a data set and transform the information into a comprehensible structure for ...

Data mining - Wikipedia

The General Data Protection Regulation (GDPR) mentions several legal grounds for the lawfulness of processing of personal data of data subjects. A lawful basis for processing personal data consists of at least one of those legal grounds and can vary per personal data processing activity and purpose.

GDPR: legal grounds for lawful processing of personal data

Much of data management is essentially about extracting useful information from data. To do this, data must go through a data mining process to be able to get meaning out of it.

6 Important Stages in the Data Processing Cycle

[Previous Chapter](#) | [Next Chapter](#) | [Index of Chapters](#) Why does this topic matter to organisations? Processing of personal data is lawful only if, and to the extent that, it is permitted under EU data protection law. If the controller does not have a lawful basis for a given data processing activity (and no exemption or derogation applies) then that activity is prima facie unlawful.
