the pavement design process. The Pavement Design Engineer must integrate this information into the Materials Design Package (Materials Design Report, Pavement Design Summary and Preliminary Pavement Structure Cost Estimate) that will provide the necessary documentation and communication of this design process.

engineering judgments have been included to fit Ohio's conditions. The pavement design procedures relate the performance of a pavement to its structural design and the loading applied to the pavement. Failure mechanisms derived from poor mix design, poor material quality, or poor construction practices are not addressed in this manual.

They determine an existing pavement's structure, confirm its structural adequacy and help determine why it failed and how it will perform with various maintenance alternatives. Pavement evaluations are invaluable in determining the best and most economical pavement design and rehabilitation approach based on an annual cost analysis.

The AASHTO design method accounts for these uncertainties by incorporating a reliability level R to provide a factor of safety into the pavement design and thereby increase the probability that the pavement will perform as intended over its design life. The levels of reliability recommended by AASHTO for various classes of roads are summarized ...
