In applied mechanics, bending (also known as flexure) characterizes the behavior of a slender structural element subjected to an external load applied perpendicularly to a longitudinal axis of the element.. The structural element is assumed to be such that at least one of its dimensions is a small fraction, typically 1/10 or less, of the other two. When the length is considerably longer than ...

2 The "Joukowski equation" for fluids The fundamental equation in waterhammer theory relates pressure changes, Δp , to velocity changes, Δv , according to $\Delta = \Delta p \cdot c \cdot v \rho$ (1) where ρ is the fluid mass density and c is the speed of sound. Korteweg's (1878) formula defines

Even if there is no shear or moment applied, do you believe that it will crush from the axial load? The uniformity and homogeneity of the material should be challenged.
