Hi, I have a problem with the radiator fan running continuously. History: Problem occurred a few months back and the mechanic replaced the high pressure A/C sensor. This stopped the radiator fan running all the time and also fixed the lack of cold air from the air-conditioning. However, the problem has come back with the radiator fan.

However, .. if I turn on the engine fan before it gets over 200, it won't get any hotter than 205 so I'm thinking it's an ECM setting telling the fan when to turn on. They probably think it's a good idea to overheat the engine to save a little bit of fuel spinning that fan. I've seen it above 200 with the fan not running.

The difference between the two modules is the fan timing. The 8042103 will control the period of time the engine fan is on due to high air conditioning head pressure. The 8042105 will defer the fan timing to the engine ECM. The two cannot be interchanged without affecting the period of time the engine fan stays on. 5. I have a Peterbilt.
